

Electrophysiology for Clinicians

EDITED BY

MIGUEL A. BARRERO GARCIA MD

Clinical Lecturer, Université de Montréal
Cardiologist, Centre Hospitalier Régional de Trois Rivières, Quebec, Canada

PAUL KHAIRY MD, PhD, FRCP(C)

Canada Research Chair, Electrophysiology and Adult Congenital Heart Disease
Director, Adult Congenital Heart Center, Montreal Heart Institute
Associate Professor of Medicine, Université de Montréal, Quebec, Canada
Boston Adult Congenital Heart Service, Harvard University, Boston

LAURENT MACLE MD, FRCP(C)

Associate Professor of Medicine, Université de Montréal
Cardiologist and Director of Electrophysiology Fellowship Training Program,
Montreal Heart Institute, Quebec, Canada

STANLEY NATTEL MD

Professor of Medicine and Paul-David Chair in Cardiovascular Electrophysiology,
Université de Montréal
Cardiologist and Director of Electrophysiology Research Program,
Montreal Heart Institute, Quebec, Canada

Contents

About the Contributors	vii
Foreword.....	ix
Preface	xi
Acknowledgments	xiii
List of Abbreviations	xv

PART 1: BASIC CONCEPTS

Chapter 1	Basic Cardiac Electrophysiology	3
	<i>Miguel A. Barrero Garcia and Stanley Nattel</i>	
	I. The Electrical System of the Heart	4
	II. Ion Mechanisms of the Cardiac Action Potential	6
	III. Regulation of Ionic Permeabilities	8
Chapter 2	Antiarrhythmic Drugs	11
	<i>Miguel A. Barrero Garcia and Stanley Nattel</i>	
	I. General Principles	12
	II. Specific Antiarrhythmic Drugs	15
	III. Proarrhythmia	30

PART 2: DISORDERS OF IMPULSE FORMATION AND CONDUCTION

Chapter 3	Sinoatrial Node Disorders	35
	<i>Miguel A. Barrero Garcia and Mario Talajic</i>	
	I. General Principles	36
	II. Specific Entities	36
	III. Diagnostics for Sinoatrial Node Dysfunction	42
	IV. Therapy	44
	V. Cardiology Evaluation	45

Chapter 4	Atrioventricular Conduction Disorders.....	47
	<i>Miguel A. Barrero Garcia and Mario Talajic</i>	
	I. General Principles	48
	II. First-Degree AV Block	48
	III. Second-Degree AV Block	49
	IV. 2:1 AV Block	55
	V. Third-Degree AV Block	55
	VI. AV Dissociation	58
	VII. Fascicular Blocks	60

PART 3: SYNCOPE, SUDDEN CARDIAC DEATH, AND CLINICAL ARRHYTHMIAS

Chapter 5	Syncope	65
	<i>Miguel A. Barrero Garcia and Laurent Macle</i>	
	I. General Principles	66
	II. Mechanisms	66
	III. Clinical History	67
	IV. Physical Examination	68
	V. Diagnosis	68
	VI. Therapy	70
	VII. Cardiology Evaluation	72
Chapter 6	Sudden Cardiac Death	73
	<i>Miguel A. Barrero Garcia and Mario Talajic</i>	
	I. General Principles	74
	II. Mechanisms	74
	III. Clinical History	75
	IV. Physical Examination	75
	V. Diagnosis	76
	VI. Therapy	78
	VII. Diseases with Increased Risk of Arrhythmic SCD	79

Chapter 7	Atrial Fibrillation	97
	<i>Miguel A. Barrero Garcia and Peter Guerra</i>	
	I. General Principles	98
	II. Mechanisms	98
	III. Clinical History	99
	IV. Physical Examination	100
	V. Diagnosis	100
	VI. Therapy	102
	VII. Primary Prevention	108
	VIII. Cardiology Evaluation	109
Chapter 8	Atrial Flutter	111
	<i>Miguel A. Barrero Garcia and Laurent Macle</i>	
	I. Typical Atrial Flutter	112
	II. Atypical Atrial Flutter	117
Chapter 9	Supraventricular Arrhythmias	121
	<i>Miguel A. Barrero Garcia and Marc Dubuc</i>	
	I. General Principles	122
	II. Premature Supraventricular Contractions	122
	III. Atrial Tachycardia	125
	IV. Junctional Tachycardia	130
	V. Atrioventricular Nodal Reentrant Tachycardia	131
	VI. Atrioventricular Reentrant Tachycardia	135
	VII. Short PR Syndrome	141
Chapter 10	Ventricular Arrhythmias.....	143
	<i>Miguel A. Barrero Garcia and Léna Rivard</i>	
	I. General Principles	144
	II. Premature Ventricular Contraction	145
	III. Accelerated Idioventricular Rhythm	148
	IV. Ventricular Tachycardia	149
	V. Bidirectional VT	164
	VI. Bundle Branch Reentry VT	165
	VII. Ventricular Flutter	167
	VIII. Ventricular Fibrillation	167

PART 4: PACEMAKERS, DEFIBRILLATORS, AND TECHNIQUES

Chapter 11	Permanent Pacing	173
	<i>Miguel A. Barrero Garcia and Bernard Thibault</i>	
	I. General Principles	174
	II. Pacing Codes and Modes	176
	III. Principles of Pacemaker Implantation and Follow-up	177
	IV. Basic Programming	180
	V. Pacemaker Complications and Troubleshooting	186
	VI. Physiologic Pacing	197
	VII. Biventricular Pacing in Systolic Heart Failure	198
 Chapter 12	 Implantable Cardioverter Defibrillators	 205
	<i>Miguel A. Barrero Garcia and Bernard Thibault</i>	
	I. General Principles	206
	II. Basic Programming	211
	III. Principles of ICD Implantation and Follow-up	215
	IV. ICD Complications and Troubleshooting	217
	V. Adjunctive Therapy with ICDs	224
 Chapter 13	 Selected Techniques and Interventions	 227
	<i>Miguel A. Barrero Garcia and Paul Khairy</i>	
	I. Electrophysiological Study	228
	II. Temporary Pacing	230
	III. Electric Cardioversion	231
	IV. External Defibrillation	233
	V. Carotid Sinus Massage	234
	VI. Tilt Table Testing	236
	VII. Autonomic Modulation Testing (other than TTT)	238
	VIII. Signal-averaged ECG	240
	IX. T-Wave Alternans Testing	241
	X. Anticoagulation in EP	242
 Index	 247

About the Contributors

Editors

MIGUEL A. BARRERO GARCIA MD

Clinical Lecturer, Université de Montréal
Cardiologist, Centre Hospitalier Régional de Trois Rivières, Quebec, Canada

PAUL KHAIRY MD, PhD, FRCP(C)

Canada Research Chair, Electrophysiology and Adult Congenital Heart Disease
Director, Adult Congenital Heart Center, Montreal Heart Institute
Associate Professor of Medicine, Université de Montréal, Quebec, Canada
Boston Adult Congenital Heart Service, Harvard University, Boston

LAURENT MACLE MD, FRCP(C)

Associate Professor of Medicine, Université de Montréal
Cardiologist and Director of Electrophysiology Fellowship Training Program, Montreal Heart
Institute, Quebec, Canada

STANLEY NATTEL MD

Professor of Medicine and Paul-David Chair in Cardiovascular Electrophysiology, Université de
Montréal
Cardiologist and Director of Electrophysiology Research Program, Montreal Heart Institute, Quebec,
Canada

Contributors

MARC DUBUC MD, FRCP(C), FACC, FHRS

Electrophysiology Service, Department of Medicine, Montreal Heart Institute
Associate Professor of Medicine, Université de Montréal, Montreal, Quebec, Canada

PETER G. GUERRA MD

Chief of Cardiac Electrophysiology, Electrophysiology Service, Department of Medicine, Montreal
Heart Institute
Assistant Professor of Medicine, Université de Montréal, Montreal, Quebec, Canada

LÉNA RIVARD MD, FRCP(C)

Electrophysiology Service, Department of Medicine, Montreal Heart Institute, Université de
Montréal, Montreal, Quebec, Canada

MARIO TALAJIC MD, FRCP(C), FACC, FHRS

Electrophysiology Service, Department of Medicine, Montreal Heart Institute
Chair, Department of Medicine, Université de Montréal, Montreal, Quebec, Canada

BERNARD THIBAUT MD, FACC, FHRS

Electrophysiology Service, Department of Cardiology, Montreal Heart Institute
Assistant Professor of Medicine, Université de Montréal, Montreal, Quebec, Canada

Foreword

William G. Stevenson, MD
Professor of Medicine
Harvard Medical School
Director, Cardiac Arrhythmia Program
Brigham and Women's Hospital
Boston, Massachusetts

Cardiac arrhythmias present major management issues for all physicians who care for patients who have heart disease. The development and now common use of invasive electrophysiologic techniques, often in concert with catheter ablation, has fostered an explosion of knowledge in this field. The resulting definitions of mechanisms and physiology have translated into nuanced understandings of clinical features of common cardiac arrhythmias, as well as rare ones. Detailed cardiac mapping studies have defined new varieties and types of arrhythmias, and the findings from these studies have been related back to the electrocardiogram and other clinical features of arrhythmias. For example, a variety of types of atrial flutter have been defined, and specific types can be anticipated from the nature of the underlying heart disease, and from the electrocardiogram. This recognition is not merely of academic interest, but also informs the clinician about the likely success, ease, and risks of ablation therapy for that arrhythmia, information important to assessing treatment options. The situation is similar for other supraventricular tachycardias, as well as for ventricular tachycardias.

A number of genetic syndromes causing ventricular arrhythmias and sudden death are now recognized. The common use of implantable defibrillators has improved our understanding of the nature of ventricular arrhythmias that cause sudden death in rare syndromes and common cardiac diseases. All physicians will encounter patients for whom these devices can be life-saving. The optimal use of implantable devices involves not only recognition of the patients who need them, but also awareness of the significant progress in strategies to avoid potential adverse effects of these devices, such as the potential for diminished cardiac function during right ventricular pacing, and inappropriate shocks that reduce quality of life.

While this expanding body of knowledge is disseminated among subspecialists at the cutting edge of the field, it is often not organized and presented in an easily

accessible format for the vast majority of health care providers. *Electrophysiology for Clinicians* is a superb distillation of the field for clinicians. Authored by leaders in the field, led from the Montreal Heart Institute, it is a clear and concise text emphasizing clinically valuable insights and providing their pathophysiologic basis. Overviews of the fundamentals of arrhythmias and therapies provide the clinician with the necessary foundation for incorporating and retaining new advances into his or her knowledge base. This book is of great value to health care providers who care for patients who have cardiac arrhythmias.

Preface

The study of rhythm and conduction abnormalities in modern times has been facilitated by sophisticated diagnostic and therapeutic techniques. The explosion of knowledge regarding mechanisms that govern rhythm abnormalities has led to the creation of a highly specialized field, and consequent evolution of new concepts, terminology, and approaches.

Despite technological advances bringing increasingly complex interventions, the backbone of diagnostic and management strategies in cardiac electrophysiology rests on clinical grounds. Unfortunately, textbooks, monographs, and reviews largely focus on technical aspects or rely on ultraspecific electrophysiological jargon, limiting their utility as teaching tools for health professionals interested in clinical applications of state-of-the-art knowledge. This book is a response to the requests of clinicians, trainees, and other health professionals for essential information in a concise, readable, and easily accessible format.

Electrophysiology for Clinicians attempts to unravel the complexities inherent to cardiac electrophysiology, with a particular focus on diagnosis and management of cardiac arrhythmias, and indications for patient referral. With its standardized chapter outline approach including key points, color figures, charts, and tables, this handy guide will help demystify the essentials of cardiac electrophysiology for the practicing caregiver.

Acknowledgments

To my wife, Annia, and to our children Miguel, Manuel, and Marcel.

I also wish to acknowledge Sebastien Grefford for his personal assistance in making this book possible.
